

SCIENTIFIC WORKSHOPS & INTERCHANGES

The Role of Chemotherapy and Novel Combinations in Triple Negative Breast Cancer

- Gain insight into oncologists' opinions and perspectives on the evolving role of chemotherapy in TNBC
- Identify factors that influence treatment selection and planning for patients with TNBC, particularly in those who progress through frontline therapies
- Discuss clinical challenges and areas of uncertainty faced when selecting later lines of therapy for patients with TNBC
- Obtain feedback on novel therapies in TNBC and how these may impact the future treatment landscape
